Local pressure perturbation in one periodic unit cell, $p' = p - \langle p \rangle_{x\text{-}z\,\mathrm{slice}}$
(a) Parallel
main flow: +y (out of plane)
max|p′| = 2.23e − 07 Pa
(b) Perpendicular
main flow: +x →
max|p′| = 10.4 Pa

local pressure perturbation p′ (Pa)
Periodic-cell local redistribution only; p' range is not a macroscopic pressure drop.
